DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, 30-31, and 34-39, drawn to first and second links capacity determining limiting capacity changing average power per bit, classified in class 455, subclass 450.
- II. Claims 19-29, 32-33, and 40-41, drawn to determining available sources for first and second links for a given bit rate, classified in class 370, subclass 252.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions I and II each has separate utility such as invention I is directed to determining capacity between first and second links and if one link is determined to be limiting then the average power bit rate is changed; and invention II is directed to determining if there is available resources for first and second links for a given bit rate, if resources are available for said links then selecting and using desired bit rates.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
